IFSA Data Storage Inc (IFSA-DSI) announces partnership with BMS CAT

MAGNOLIA, Ark. – IFSA Data Storage, Inc. of Magnolia, Ark., announces a new partnership with Blackmon-Mooring Steamatic Catastrophe, Inc (BMS CAT), a world leader in documents and records restoration.

The partnership is a natural one for IFSA-DSI, a vital records storage company with national and international vault connectivity through its association with the Firelock™ Affinity Network.

IFSA-DSI President Philip Betsch said “We are very pleased to announce this partnership between BMS CAT and IFSA-DSI. This partnership will offer IFSA-DSI clients another high-quality disaster recovery service that they can access through our services.”

Currently, IFSA-DSI offers its clients the highest-quality media and electronic vital records vault on the market today. The company facility provides an ideal location for business and government entities to store their most vital records and irreplaceable items. The IFSA-DSI vault allows clients to store microfilm, computer media, and file servers in one state of the art facility.

“Business, government, and other institutions face disasters of many types at unexpected times,” said Betsch. “Normally, when these unanticipated events occur, two things become of great importance: the technologies required to facilitate a rapid recovery and the additional outside help it takes to address supplemental emergency requirements.

“The partnership between BMS CAT and IFSA-DSI will provide a great resource to our clients who face an urgent and critical need of records restoration in the face of smoke, water, fire, and many other types of damage.”

BMS CAT is an affiliate of the Blackmon-Mooring Steamatic group of companies founded more than half a century ago, and it has developed many of the methods and protocols used today for the recovery of such materials, offering specialized recovery services to their clients. BMS CAT has worked on a number of large-scale restoration projects with a wide variety of clients, including the Department of the Interior – Bureau of Indian Affairs, The Pentagon Library, RBC Securities of New York, the Bank of Ireland, and Smithsonian Institution – Museum of American History, Starbucks Coffee Corporate Headquarters, and Tulane University of New Orleans.

BMS CAT specializes in commercial and industrial property damage restoration following fires, tornadoes, floods, hurricanes, earthquakes, and other catastrophic events and is an industry pioneer in the area of global disaster recovery and facilities restoration. The company maintains 17 Regional Response Centers as well as a network of more than 200 Steamatic and BMS Technologies Franchise locations in North America and 24 countries. Since 1981, BMS CAT has developed and refined many specialized technologies for the recovery of a myriad of items; in particular, document and book

recovery through its own fifth generation freeze-drying chambers and state-of-the-art records and media recovery facility in Fort Worth, Texas.

In addition, BMS CAT has been the industry leader for years in all manner of fire, water, and disaster recovery of all forms of paper media, books, film media, and electronic/magnetic media cleaning, decontamination, and even reproduction being coupled with recovery activities.

For more information on how the BMS CAT and IFSA Data Storage, Inc. partnership can be a benefit to maintaining and restoring your vital records, call IFSA-DSI at 870-234-9928 or visit their website at www.ifsadatastorage.com.
